**Precision Traffic and Safety Signs Exclusive Distribution
Agreement with PSI Acquisition, LLC**

KNOXVILLE, TN – Precision Traffic and Safety Systems, LLC., a leading distributor of best-in-class products and solutions for intersection management, communications and safety for the intelligent transportation industry, announced today the signing of an exclusive distribution agreement with PSI Acquisition, LLC (PSI) providing the revolutionary UltraPower Stealth (UPStealth) battery back-up system.

PSI has developed a solution to the battery back-up problem by introducing an environmentally friendly battery panel that can configure to almost any shape and fits inside the existing intersection cabinet not typically accessible by lead acid or gel filled products. PSI provide a standard battery panel to fit in the unused space between the internal rack and outside shell of a 332/334 and 336S cabinet or a shelf panel mounted on the top or underside in a NEMA cabinet.

“PSI is developing some of the most innovative battery back-up products we have seen in the industry and are on the cutting edge of solutions for traffic management. Our customers are looking to new technology to solve the next generation of traffic management initiatives and PSI is delivering,” stated Eric Seabrook, President of Precision Traffic and Safety Systems.

“We are thrilled to include Precision Traffic and Safety Systems into our growing distribution network and look forward to teaming with them to best serve our customers,” stated Tim Hysell, CEO for PSI. “With their fast growing success in the traffic industry, Precision was the clear choice to represent PSI and our UPStealth products.”

Precision Traffic and Safety will provide the PSI UPStealth solution exclusively in Alabama, Kentucky, Michigan, Mississippi, Ohio, Tennessee and West Virginia.

About PSI Acquisition, LLC

PSI Acquisition, LLC. Is all about intelligent traffic solutions.
